

I wrote 11 predictions before the run. Three missed.

OUTCOME	PREDICTIONS
Held	4
Partly held	1
Inconclusive	1
Missed	3
Not testable	2

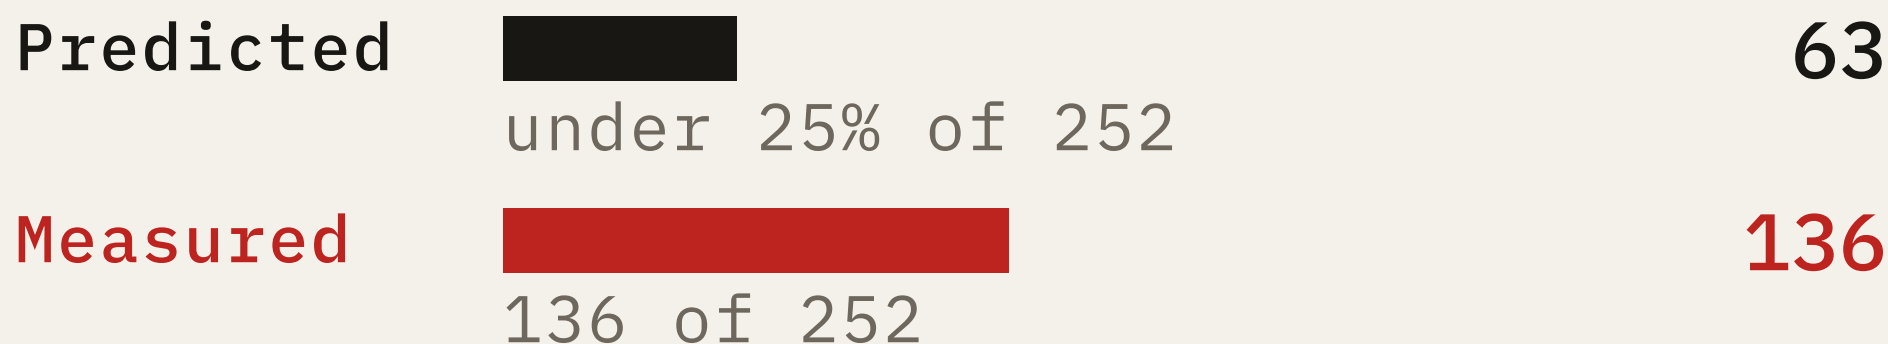

3 of 11 missed. 4 held.

Each had a threshold and was scored in the file: held, partial, inconclusive, missed, or not testable.

Two predictions rest on plain counts. Nine rest on judge tags, and the judges failed their blind check.

MISS 1 OF 3 · P1 · A PLAIN COUNT

Under 25% of search probes, I wrote. It was 54%.

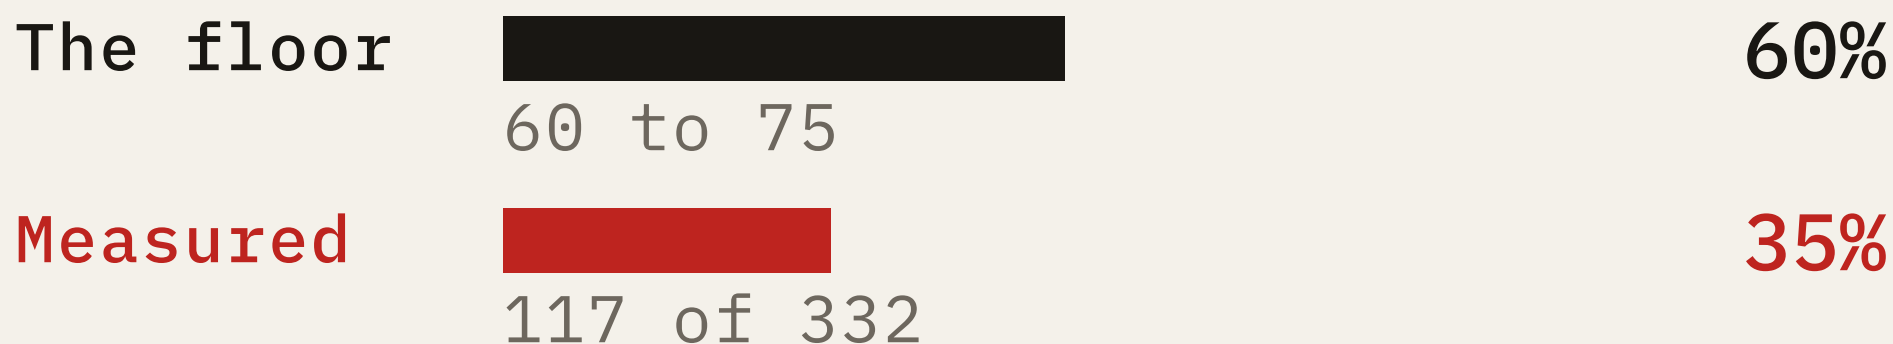

136 of 252 probes. Predicted under 63.

Search probes across four engines whose answer cited my site, baseline wave, 6 August 2026.

A probe count, not a judge tag. The one miss in the file that carries no judge error.

Agreement of 60 to 75%, I wrote. It was 35%.

117 of 332. The floor was 60%.

Exact tag-set agreement, claude-haiku-4-5-20251001 against gemini-3.8-flash, every second-wave answer.

The file's rule: below 60% means the taxonomy is underspecified, not that the engines are erratic.

MISS 3 OF 3 • P5 • ONE JUDGE SAW IT

25% of 40 would show it, I wrote. The band: 0 to 10%.

Predicted		25%
	25 or more	
Measured		10%
	band 0 to 10	

0 to 10% of all 332. Predicted 25% of 40.

Across all 332 answers. Tagged by one judge only; the other never fired. Band: floor and ceiling across both.

A judge-tag result, so it carries the judges' error. The category is barred from the headline numbers.

THE LIMIT

Two rest on counts. Nine rest on judges that failed.

RESTS ON	PREDICTIONS
Plain counts	2
Judge tags	9

2 counted. 9 judged.

P1 and P11 are probe counts. P2 to P10 are judge tags; the judges matched my labels on 3 and 12 of 40.

Scored in the file against the waves of 6 August and 4 September 2026. Public in the repo.
